After a feasibility study, the aims were agreed and a list of viable solutions drawn up. These included Solar PV & battery bank, rainwater harvesting, Biomass Boilers & thermal stores but issues arose when the choice of heating emitter were considered.

The Biomass boiler could provide large amounts of high energy heat instantly, but with living space a premium, traditional radiators were seen as a clumsy and inefficient technology to hang on the end of the system. Underfloor was an obvious alternative, but with several rooms having wood or
